Comparing to human-  
level performance

---

Improving your model  
performance

# The two fundamental assumptions of supervised learning

1. You can fit the training set pretty well.

~ Avoidable bias

2. The training set performance generalizes pretty well to the dev/test set.

~ Variance

# Reducing (avoidable) bias and variance

Human-level

Avoidable bias

Training error

Variance

Dev error

Train bigger model

Train longer/better optimization algorithms

- momentum, RMSprop, Adam

NN architecture/hyperparameters search

RNN  
CNN

More data

Regularization

-  $L_2$ , dropout, data augmentation

NN architecture/hyperparameters search
